

NAUTIWATER FFR-3K REGENERABLE WASHDOWN SYSTEM

As an alternative upgrade to our [NAUTICAL 3000 Boatwash System](#), we offer the [FFR-3K Regenerable Washdown System](#). This is a full function, manually regenerated, high-quality portable water conditioning system that will supply approximately 3000 gallons of treated stain-free/soft water¹ for washing down boats, yachts, autos and RV's. While water softener systems are not "spot free", the [FFR-3K](#) greatly reduces spotting associated with untreated hard water.

SYSTEM ADVANTAGES:

- No cartridges to fill or change...comes with a brine/salt storage tank
- Ease of use...regenerate system with the full function 4-position valve
- Low maintenance...just add salt to the brine tank
- 4 ft dockside inlet hose included

OPTIONS:

- Sediment cartridge filter
- Activated Carbon cartridge filter (for odor)

While this system is designed for washing boats, RV's, etc., it can be used to fill onboard water tanks for freshwater washdown, showering and cooking. This system is not designed for drinking water. Optional filter systems are available for drinking water applications. Check out our [MWC-ULTRA4 Ultrafilter System](#).

Available From:

¹ Based on 3 grains/gallon hardness & 1 ppm iron (Fe++)
